Fonecta challenge · Since AI Hackathon 2026

Ajantasa

Opening hours that stay up to date, without the owner having to remember.

A feature of Fonecta Connect · Team Hocus Focus

The problem

The listing says open. The door is locked.

> “Online it said open 08:00–17:00, but it was closed on Good Friday. Wasted trip.”

2-star review · Kahvila Kipinä, Turku · from Fonecta’s synthetic dataset

The idea

Connect notices, so the owner doesn’t have to

Today

The owner has to spot the problem, log in, work out the right hours and update every channel.

With Ajantasa

Connect finds the problem, proposes the exact hours, explains why and publishes them. The owner just taps yes.

How it works, with Kahvila Aurora in Helsinki

Five steps, one complete chain

1 · Connect

Detect

Christmas Eve is coming, and Google shows regular hours.

2 · Connect

Suggest

Open 07:30–13 on 24 Dec, same as last year.

3 · Connect

Contact

An SMS explains why, with a no-login link.

4 · Owner

Decide

Accept, edit or ignore. No login needed.

5 · Connect

Apply

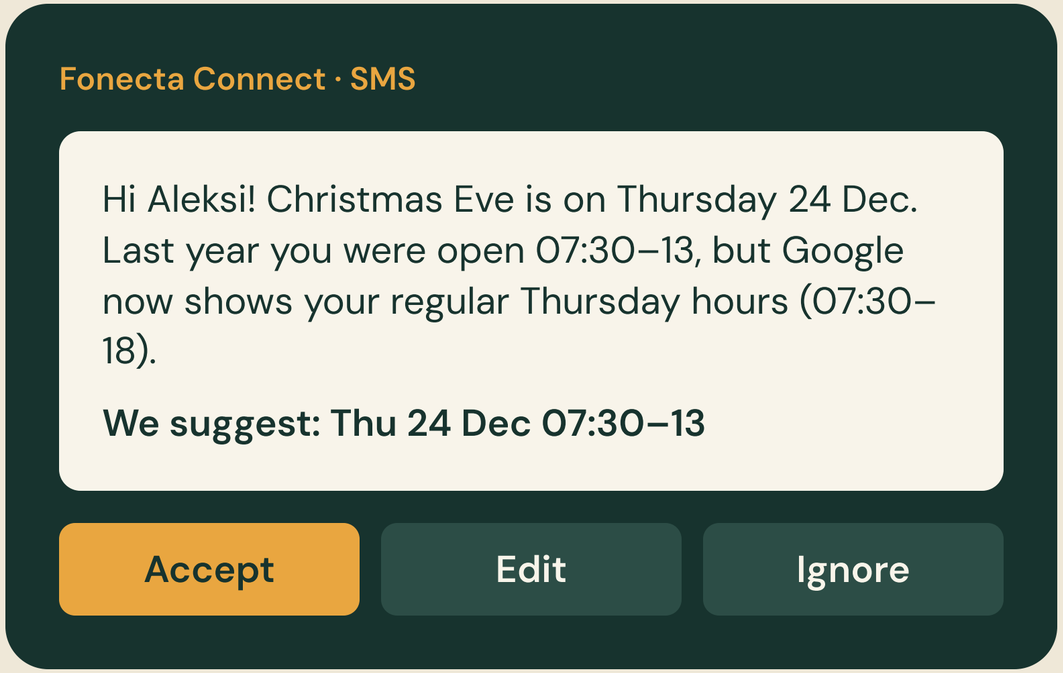

Written to Yext, and the owner sees where it shows.

What the owner sees

One message, one reply

The message says what’s needed and why. The owner replies by text or by voice, or opens the link: no account, no password.

In Fonecta’s 2025 pilot, 53% of suggestions got no reply. So answering has to be effortless.

After the owner says yes

The owner knows where it shows, and when

Google

about 2 minutes

Finder

about 10 minutes

Bing

about 1 day

Apple Maps

about 2 days

We only name places where the business is live. Aurora opted out of Facebook, so we don’t claim it.

Typical update speeds from Fonecta’s simulator dataset

How we prevent wrong suggestions

Code detects, AI explains, the human decides

Code

Compares dates and hours, and checks every suggestion before anyone sees it.

AI

Writes the friendly message and the reason. If its proposal fails the checks, a safe template replaces it.

Owner

Always has the last word. Nothing changes without their decision or their permission.

Learning

Every decision improves the next suggestion

When the owner…	Connect…
Edits a suggestion	Proposes their version next time
Ignores a suggestion	Doesn’t bring it up again
Ticks “do this automatically”	Applies valid changes, then tells them
Has no history at all	Asks a careful question, not a guess

Results

Better suggestions than the baseline

62.1

Score

Baseline: 54.5

76%

Closed-door search views prevented

Baseline: 69%

67%

At-risk search views protected

Baseline: 57%

Fonecta’s scoring script, dev businesses, 2026 season · 2025 back-test: 61.0 vs 53.2

What’s next

The same loop works for other jobs

Opening hours

What we built for this challenge.

Automatic posts

Suggest a post, and the owner approves it with one tap.

Review replies

Draft a reply, and the owner edits or accepts it.

For Fonecta

Try it yourself

Scan to get your own private copy of an owner’s chat on our live demo. Answer by text or by voice. No login.

Your own copy · synthetic data · resets for everyone

Ajantasa, a feature of Fonecta Connect

Aleksi doesn’t have to remember anything.

Connect takes care of it.
